

Name That Composer (Artist)

Linda Call

Galvanize Q1 Project

Overview

Students of classical music/art history often learn facts about the artists such as the period of time in which the artist lived or the name of the artistic style (romantic). Learning these facts does not do much to help the student truly understand and appreciate the art. The goal of this project is to help students come to a greater understanding and appreciation of

classical music/artists and their works by creating a website that students can utilize to learn about the styles of important classical composers/artists .

Goals

1. Users will learn about the styles of important classical composers/artists.
2. Users will be able to listen to music/view art created by the composers/artists.
3. Users will be able to take a quiz in which they are presented with new works by the artist (works not presented in the study materials). Users will attempt to identify the composer/artist by recognizing the style of the work.

MVP

1. Users will be presented with a list of 15 - 30 predefined, important classical composers with their pictures.
2. When the user clicks on the picture of a composer, they will be presented with basic facts about the composer, a description of the composer's style and a playable piece of music by the composer.
3. The user can request a basic quiz. The quiz will consist of 10 questions (presented one at a time) in which the user must identify the composer of one of the pieces of music included in the study materials.
4. The user can request a more advanced quiz. This quiz will consist of 10 questions in which the user is presented with a piece of music NOT included in the study materials and must identify the composer based on the style of music.
5. Basic styling.

Technologies

1. HTML/CSS/JavaScript/jQuery
2. Bootstrap
3. MediaWiki api

Stretch Goals

1. Include classical painters or other artists
2. Allow sorting by name, birth date or influence
3. Allow filtering by era, location or keyword
4. More extensive styling or animations
5. Quizzes on facts as well as identification of the art
6. Deploy to S3
7. Include dynamic lists of artists from wikipedia
8. Include quotes about/by composers
9. Include the ability to save a quiz score
